

Jevaughn Newman

Risk Analyst

[LinkedIn](#) | 613-407-1125 | jevaughn.newman@gmail.com | [Portfolio](#) | [Industry Analysis: Real-Time Payment Risk](#)

Summary

- Analytical professional dedicated to maintaining financial system integrity through high-fidelity data reporting and quantitative risk monitoring. Proficient at deconstructing complex transactional frameworks to identify liquidity anomalies and settlement risks, providing stakeholders with the actionable intelligence required to mitigate exposure, ensure market stability, and optimize risk-informed strategies. Leveraging SQL and cloud-based architecture to support the evolution of real-time payment infrastructure.

Skills /Certifications

- **Certifications:** Microsoft: Power BI Data Analyst Associate (PL-300) | **Engineering:** Snowflake | dbt | SQL
- **Technical Stack:** Python (Pandas, NumPy) | Power BI | Tableau | Power Query | Excel (Advanced Modeling)

Professional Experience

Senior Claims Adjuster Intact Financial Corporation *Ottawa, ON, Canada* **06/2022 - Present**

- **Risk Analytics:** Engineered and maintained monthly **DART** updates and high-fidelity data feeds for actuarial risk models to accurately calculate portfolio exposures and financial reserves.
- **Financial Mitigation:** Mitigated financial loss by analyzing behavioural patterns and data anomalies, contributing to a **\$10M risk-reduction goal** through early fraud detection.
- **Stakeholder Reporting:** Developed interactive visualizations to transform complex insurance datasets into strategic insights, translating technical risk data for Legal and Finance leadership to optimize payout precision.

Claims Representative I & II (Promoted within 8 months) *Ottawa, ON, Canada* **01/2020 - 06/2022**

- Generated monthly performance reports using Excel and Guidewire to track unit-level **KPIs**, providing visibility into volume trends and claim exposures used to refine **actuarial risk models**.
- Automated data collection for **50+ routine claims**, cutting **processing time by 15%** and improving data accessibility for internal audits.

Projects

Adversarial Identity & Fraud Risk Engine AIFRE [Executive Summary \(GitHub\)](#)

- **Infrastructure:** Engineered a forensic data pipeline using **Snowflake** and **dbt** (Medallion architecture) to transform raw transactional data into high-fidelity tables for risk synthesis.
- **Risk Modelling:** Developed logic to detect behavioural anomalies and settlement outliers, aligning with **Financial Risk Frameworks** used in critical market infrastructures.
- **Technical Rigour:** Prioritized risk-first engineering and modular code design to ensure the accuracy and auditability of large-scale financial simulations.

Insurance Claims Analysis East Coast Insurance [Executive Summary \(GitHub\)](#)

- **Data Architecture:** Engineered a star-schema data model in **Microsoft SQL Server** to unify multi-source datasets, streamlining reporting cycles by 40% and optimizing query performance for large-scale risk synthesis.
- **Quantitative Reporting:** Designed and deployed interactive **Power BI** dashboards (DAX/Power Query) to provide real-time visibility into financial outcomes, creating automated reporting workflows that eliminate manual data reconciliation.
- **Risk Mitigation & Analytics:** Conducted **SQL trend analysis** to investigate anomalies in demographic data, informing risk model adjustments that projected a 12% reduction in future financial exposure.

Education

Bachelor of Arts Carleton University *Ottawa, ON, Canada*

- Major in Economics with a Minor in Statistics
